SIL PROCUREMENT, SUPPLY CHAIN & INVENTORY

Staff, requesters and heads of department

For all staff and department in-charges

User manual · 28 October 2026

Figures, limits and approval chains are the system defaults; your hospital may have changed them.

Contents

1. Which request do I use?
2. Staff requisitions (*Procurement → My requisitions*)

   - Getting paid
   - Retiring an advance
8. For heads of department (in-charges)
   - Approving
   - Signing off deliveries
   - Department plan (*Sourcing & contracts → Procurement plans*)
   - Watching spend

Staff, requesters and heads of department

For every staff member who needs goods, services or cash, and for ward / department in-charges (heads of department) who approve their staff's requests.

You are	Built-in role	What you do here
Any staff member	any staff role (e.g. Department / Ward Staff)	Raise requisitions and petty cash requests, accept deliveries, collect goods
Ward / department in-charge (HOD)	Department / Ward In-charge	The same, plus approve your department's requests, sign off service deliveries and department plans

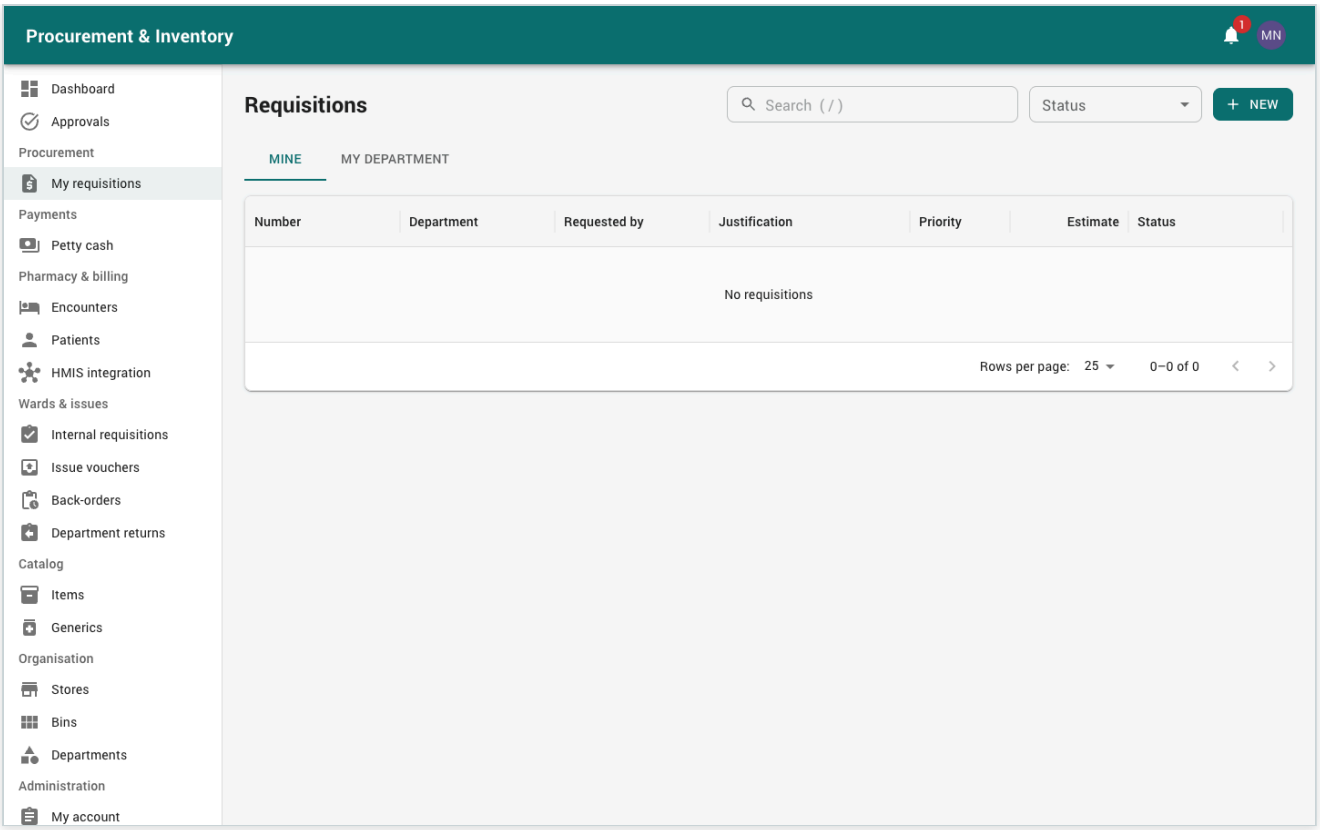

Read Getting started first.

1. Which request do I use?

You need	Use	Menu
Anything for your department: stock items, goods the hospital does not stock, a service or repair	**Staff requisition**	*Procurement → My requisitions*
Routine ward stock from the store or pharmacy (top-ups, consumables, drugs)	**Internal requisition**	*Wards & issues → Internal requisitions*
A small cash payment, or an advance you will account for	**Petty cash request**	*Payments → Petty cash*
Record ward stock used on an admitted patient (so it is charged)	**Charge ward consumables**	*Pharmacy & billing → Encounters*

A staff requisition may mix stock items and non-stock items. Stock items are sent to the store automatically; everything else goes to Procurement.

2. Staff requisitions (*Procurement → My requisitions*)

My requisitions: Mine / My department, with New at the top right

Raising one

1. *My requisitions* → *New* (or `Alt+N`).
2. Fill in the header:
   - **Department / cost centre**: your own department, or another one if you raise it on their behalf;
   - **Project** (optional), **Priority**, **Required by**;
   - **Justification**: why it is needed. Approvers read this;
   - **Store for the stock items**: the store that should issue any stock lines;
   - **Budget** line (optional).
3. Add lines with *Add line*:
   - **Stock item**: pick the catalog item and quantity;
   - **Goods / service not in stock**: describe *What is needed*, the unit, quantity and **estimated cost**; add *Notes / specification*. Pick the **GL account** if you know it (your hospital may make it required).
4. Attach quotes, specifications or photos.
5. *Save draft* to finish later, or *Submit for approval*.

When you submit, the **budget** is checked. Depending on the budget's setting you either see a warning, or the submission is refused until the budget is increased.

Approval

Amount	Approvers (default)
Up to 500,000	Head of department (in-charge of the requesting department)

Amount	Approvers (default)
Above 500,000	Head of department → Finance manager

You are notified at each step. If it is **Returned**, open it, make the changes asked for in the comment, and submit again.

Following it

The requisition page shows **Where it is** for every line:

- **Stock lines** become an approved internal requisition at the store. Stock is reserved for you and the store issues it.
- **Other lines** go to the Procurement queue, then onto a purchase request, an order (LPO / LSO), delivery and hand-over to you.

Statuses: Draft → Submitted → Approved → Partly converted / Converted → **Closed** (when everything is delivered). Also Returned, Rejected, Cancelled.

You get a notification when:

- the purchase request is approved;
- the order (LPO / LSO) is sent to the supplier;
- a delivery is **waiting for your acceptance**;
- goods have been received from the supplier;
- goods are **ready for collection** (with a one-time code if they hand over at the counter);
- the requisition is delivered and closed.

Cancel requisition (with a reason) withdraws it while nothing has been ordered. *PDF* prints it with the approval signatures.

---

3. Accepting a delivered service or non-stock goods

When a supplier delivers a service (repair, maintenance, consultancy) or goods bought for your requisition, the receiving officer records it. **You, or your department's in-charge, must then accept it** before the supplier can be paid.

1. Open *My requisitions*. The **Waiting for you** panel lists deliveries to accept. (In-charges also see them under *Logistics → Service certificates*.)
2. Open the certificate. Check the quantities accepted and rejected, the notes and the attachments (job card, signed note, photos).
3. Choose *Accept delivery*, or *Reject* with a reason (the officer must correct it).

What acceptance does:

- the order counts as received, so the supplier's invoice can be matched and paid;
- a **service** accepted by you counts as delivered to you;
- **goods** still have to be handed over to you (next section).

Stock levels never change for non-stock items.

---

4. Collecting goods (hand-over)

When received goods are ready, Procurement or Stores hand them over to you or a colleague in your department. You are told they are **ready for collection**.

You confirm receipt in one of two ways:

- **In the app**: open the hand-over (from the notification, or the *Waiting for you* panel on *My requisitions*) and click *I have received these*.
- **At the counter**: the officer clicks *Send code to the receiver* and you get a **6-digit code**. Tell it to the officer. The code is valid for 15 minutes; after 5 wrong attempts it stops working and a new one must be sent.

When every line is delivered, the requisition **closes** and you are told.

---

5. Internal (ward) requisitions (*Wards & issues → Internal requisitions*)

For routine stock from a store or pharmacy to your ward or department.

1. *New*: choose the **store** to supply you, priority and required-by date.
2. Add items and quantities (in base units, e.g. tablets, pieces). For an admitted patient, add the patient / encounter on the line, so the item is charged to them.
3. *Submit*. Your **ward in-charge** approves. Only the in-charge of *your* department can approve, never you.
4. On approval the stock is **reserved** for you. The store issues it oldest-expiry-first (FEFO) and prints an issue voucher.
5. If the store doesn't have everything, the rest stays on **back-order** and is issued when stock arrives.

Statuses: draft → pending approval → approved → partly issued (back-order) → issued, or closed if a back-order is cancelled.

Returning stock (*Wards & issues → Department returns*): choose the issued lines, quantity, reason and condition (resaleable or damaged / expired). The store posts the return and your department is credited.

Consumption (*Wards & issues → Consumption*, in-charges): what your department used, by period, item or patient, at cost.

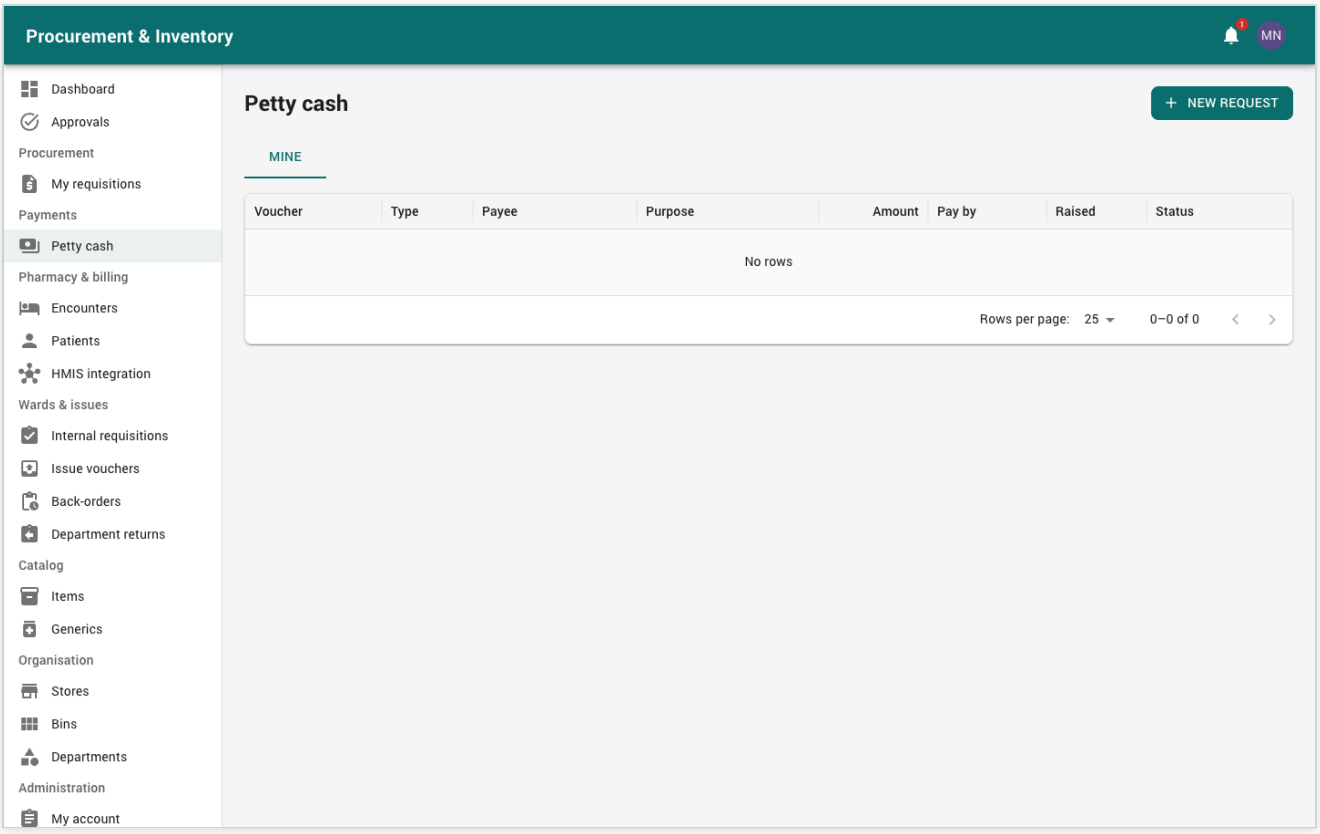

---

6. Charging ward stock to a patient (*Pharmacy & billing → Encounters*)

Ward or theatre stock already issued to your ward and used on an admitted patient: open the patient's **encounter** → *Charge ward consumables* → items and quantities. No stock moves (it was issued to the ward already); the patient's bill is charged once.

---

7. Petty cash (*Payments → Petty cash*)

Petty cash requests

Request a payment or an advance

1. *New request*: choose the **float** (e.g. your department's or Administration).
2. Type:
    - **Payment**: to a staff member or a vendor;
    - **Advance / imprest**: cash to you, which you must account for later.
3. Fill in the **purpose**, **expense account**, **cost centre**, optional project and the **amount**. Attach receipts or quotes.
4. **Pay by**: cash, **M-PESA to a phone**, **PayBill + account** or **Till**. M-PESA is only possible on floats that pay by M-PESA, and in whole shillings.
5. *Submit for approval*.

Checks you may meet:

Message	Meaning
`OVER_LIMIT`	Above the float's per-transaction limit; use a requisition instead
`INSUFFICIENT_FLOAT`	The float hasn't enough available cash now; try later or another float
`POSSIBLE_DUPLICATE`	Same payee and amount within 7 days. If it is genuinely different, fill in *Why this is not a duplicate*; approvers will see the warning
`ADVANCE_OUTSTANDING`	You have an advance not yet retired; retire it first

Approval (default)

Amount	Approvers
Up to 10,000	Your head of department → Finance
10,000 – 50,000	+ Finance manager
Over 50,000	+ Medical director / CEO

Getting paid

Once fully approved, the **float custodian** pays you:

- **cash**: collect it, then confirm in the app with *I received it*;
- **M-PESA**: the money arrives on your phone; the request is marked paid when M-PESA confirms.

Retiring an advance

Within **7 days** of receiving an advance:

1. Open the advance → *Retire the advance*.
2. *Add receipt* for each expense: amount, expense account, receipt reference, and attach the receipt image.
3. Submit. The custodian checks the receipts and either accepts them or returns them to you for correction.
    - Spent **less**: return the change to the custodian; it goes back into the float.
    - Spent **more**: the custodian pays you the difference.

You get daily reminders when a retirement is overdue, and you can't take a new advance until it is retired.

---

8. For heads of department (in-charges)

Approving

Approvals → *My inbox*. You see your department's:

- staff requisitions;
- internal requisitions;
- petty cash requests;

- purchase plans.

Check the justification, quantities, amounts and attachments, then *Approve*, *Reject* or *Return for amendment*. See Getting started → Approving, including approving by email and **delegating** while you're away.

You can't approve a request you raised yourself; it goes to another approver in the chain.

Signing off deliveries

As in-charge you can accept or reject service and non-stock deliveries for your department (section 3), even when the requester is away.

Department plan (*Sourcing & contracts → Procurement plans*)

Prepare your department's annual procurement plan: items, quantities, quarter and budget vote head. Submit it for approval (procurement → finance → management). Mid-year revisions create a new version through approval; the approved version stays in force meanwhile.

Watching spend

Reports (if your role allows): consumption by department, pending requisitions, delivered vs outstanding.
